

Description:

The 6800N-C2 chassis can house any module combination out of 6800N series modules and is compatible with all modules of 6800 series. The chassis provides redundant power supply to secure long hour reliable operation. It features exchangeable rear panel making the application flexible. The chassis can house up to 20 single-slot modules and it is in compliance with CE. The chassis adopts cooling system through front panel, ventilation going directly from the above and bottom of chassis into the inside and air out from the front side, thus avoiding a high temperature and making system working in high reliability when full loaded. In addition, the 6800N series supports SNMP.

**Features:**

- ▶ Supporting SNMP
- ▶ Compatible with 6800 series modules
- ▶ Exchangeable rear panel
- ▶ Front panel cooling system to control temperature
- ▶ All modules including power supply are hot swappable
- ▶ Providing Genlock input and loop out, making the operation much easier
- ▶ Displaying the status of both power supply and cooling fan

Ordering information:

6800N-C2	2U chassis housing up to 20 single-slot modules	6800N-FC	Network Control Module
6800N-P2	Power supply		

Description:

The 6800N-C1 is the dedicated chassis to house 6800 and 6800N series modules. It is a standard 1RU chassis where any combination of modules can be accommodated with 4 modules each occupying 2 slots or with 8 modules each occupying a single slot. The 6800N-C1 is equipped with redundant power supply and dedicated cooling fan to enable a reliable long time system operation. The compact design and infrastructure eases its installation.

**Features:**

- ▶ 1RU standard chassis
- ▶ One chassis housing up to 8 single-slot modules or 4 dual-slot modules
- ▶ Compatible with 6800 series modules
- ▶ Exchangeable rear panel
- ▶ Front panel cooling system to control temperature
- ▶ All modules are hot swappable
- ▶ Providing Genlock input and loop out, making the operation much easier
- ▶ Displaying the status of both power supply and cooling fan
